

SecureSTREAM

Although defacing websites will always remain popular among a certain set of hackers, these are generally not the attacks we should be most concerned with. Organisations targeting web sites for profit, generally wish their attacks to go undiscovered.

Seccom Global's SecureSTREAM is a cloud based website security solution that utilises a multilayered approach to protect your company's websites. SecureSTREAM has been designed to protect your website against attacks that include SYN Floods, DDOS, SQL Injections, Cross Site Scripting as well as many other well-known attacks.

With SecureSTREAM, your company's webserver is virtually invisible to the internet as it sits behind Seccom's cloud infrastructure. This means hackers do not know the true IP address of your webserver.

SecureSTREAM is a cost effective solution that works. If you aim to protect your website effectively, SecureSTREAM provides comprehensive risk management. This is a viable solution for any size business as it is simple to implement and provides an enterprise level protection for a small monthly investment.

HOW SECURESTREAM WORKS

Simply change your DNS record for your website to point to the Seccom Global SecureSTREAM cloud. SecureSTREAM will scan any packets going to your website for Trojans, Viruses and Malware and will provide protection against all known internet based threats including zero day attacks. By setting a policy on your firewall that will only accept incoming traffic to your web site that comes from the Seccom SecureSTREAM cloud or by using Seccom SecureLAN managed firewalls solution, you will have the highest levels of protection.

BENEFITS OF SECURESTREAM

SecureSTREAM uses advanced techniques to provide bidirectional protection against malicious sources, application layer DoS attacks and sophisticated threats like SQL injection and cross-site scripting. SecureSTREAM uses a combination of protections including Next Generation Firewalls technology, UTM Firewall technology, Web Application Firewall protection with application level DDoS protection and advanced flood DDoS protection available with SecureSTREAM Plus.
